

Sleeve style air springs are used for cab and seating applications, creating a smooth, comfortable ride.

- 1. Logo Color**
The Airide spring shield color indicates a very specific construction of the bellows, which helps with the identification process of the air spring.
- 2. Assembly Order Number (AON)**
This number identifies the specific Firestone assembly order number that needs to be used for ordering purposes. It is important that the complete order number is used to avoid any confusion, especially with any type of electronic ordering. The complete order number in this example is W02-358-7058.
- 3. Cross Section View**
Includes dimensional information in inches for uninflated diameter, maximum height, and collapsed height, as well as component dimensions.
- 4. Cap Identification Number**
The drawing number is molded into most caps, followed by a 4 digit number in parentheses identifying the internal cap component number. Do not confuse this code with the AON.

- 5. Piston Identification Number**
The piston identification number is molded into most pistons, followed by a 4 digit number in parentheses identifying the internal piston component number. Do not confuse this code with the AON.
- 6. BCR**
This dimension is the measurement taken between the two metal rings on each end of the assembly. Note: BCR measurement will be somewhat shorter than specified in this guide.
- 7. Weight**
The total weight of the spring assembly.
- 8. Piston Material**
Aluminum, Steel, or Composite.
- 9. Applications**
Includes all the information that is known about this specific application (i.e., model number, years of manufacture, part numbers, Firestone reference numbers, and competitor numbers, if known).
- 10. Assembly Notes**
Important information if an assembly has been obsoleted and if there is an exact replacement part available, or if it has replaced other parts.

AIR SPRING IDENTIFICATION

Assembly Order Number (AON) 2

The quickest way to identify the air spring is to read the manufacturer or Firestone assembly order number (AON) on the label adhered to the cap. The complete order number must include the W02 number at the beginning. Use the following pages to find the correct number for your air spring. The complete AON in the diagram is W02-358-7058.

Logo Color 1

The parts tables are sorted by the air spring logo color. If the AON number is not legible, identify the Airide spring shield color to narrow down your search. From there, follow the steps below to identify your air spring.

Cap Identification Number 4

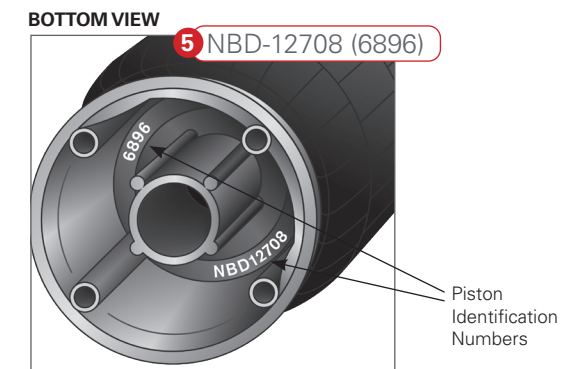

The cap can be used for further part identification in the parts diagrams by matching the drawing number (e.g. NBD-10409) or the cap component number (7042). In addition, the crimp (metal) ring around the cap has a code stamped into it. The last 4 digits of the seven-number string at the beginning of the code reference the cap identification number.

Piston Identification Number 5

The piston drawing (NBD-12708) or internal piston component number (6896) molded into the piston can also be used to narrow down the search for the correct replacement part.

BCR 6

If an additional identifier is needed, measure the distance between the two metal rings – one holding the cap in place and the other holding the bellows on the piston. This measurement is called the BCR, and is identified in the parts diagrams.
